 Vidya Pratishthan's Kamalnayan Bajaj Institute of Engineering and Technology, Baramati (Autonomous Institute)		
First Year Engineering (2023 Course)		
BS23101 - Engineering Mathematics-I (Linear Algebra, Differential Calculus and Statistics)		
Teaching Scheme: Theory: 3 Hours/Week Tutorial: 1 Hour/Week	Credits 04	Examination Scheme: In-Semester Exam: 30 Marks End-Semester Exam: 60 Marks Course Activity: 10 Marks Term Work: 20 Marks

Prerequisites:

Differentiation, Integration, Basics of Matrices and Determinants.

Course Objectives:

To make the students familiarize with concepts and techniques in Calculus, and Matrices. The aim is to equip them with the techniques to understand advanced level mathematics and its applications that would enhance analytical thinking power, useful in their disciplines.

Course Outcomes (COs): The students will be able to

CO1: Apply the concept of rank to solve systems of linear equations, examine linear dependent and independent vectors and analyze systems of linear equations and transformation.

CO2: Understand the concept of Eigenvalues and Eigenvectors and apply it for solving Engineering problems.

CO3: Expand function in power series by using Taylor's and Maclaurin's series and evaluate indeterminate form using L' Hospital Rule.

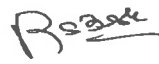

CO4: Develop basic concepts of partial derivatives and apply to solve various problems on partial derivatives.

CO5: Apply partial differentiation to evaluate Jacobian, extreme values of the functions and estimate Error & Approximation.

CO6: Represent, visualize and analyze Statistics data and learn basic concepts of probability.

Principal
Vidya Pratishthan's
Kamalnayan Bajaj Institute of
Engineering & Technology, Baramati
Vidyanagari, Baramati-413133

Course Contents

Unit 1: Linear Algebra-Matrices, System of Linear Equations [07 Hours]

Rank of a Matrix, Echelon form and Normal form, System of Linear Equations, Linear Dependence and Independence, Linear and Orthogonal Transformations.

Unit 2: Linear Algebra-Eigen Values and Eigen Vectors, Diagonalization [07 Hours]

Eigenvalues and Eigenvectors, Cayley Hamilton theorem, Diagonalization of a matrix and Applications, Application to problems in Engineering.

Unit 3: Differential Calculus [07 Hours]

Expansion of Functions: Taylor's series, Maclaurin's series, Indeterminate Forms, L' Hospital rule, Evaluation of limits.

Unit 4: Partial Differentiation [07 Hours]

Introduction to functions of several variables, Partial Derivatives, Euler's Theorem on Homogeneous functions, Partial derivative of Composite Function, Total Derivative.

Unit 5: Applications of Partial Differentiation [07 Hours]

Jacobian and its applications, Errors and Approximations, Maxima and Minima of functions of two variables, Lagrange's method of undetermined multipliers.

Unit 6: Statistics and Probability [07 Hours]

Importance of Statistics in Engineering. Data Types, Measures of Central Tendency and their Applications. Probability Theory. Classical definition, Equiprobable Sample Space. Conditional Probability, Bayes Theorem, Applications.

Text Books:

1. Higher Engineering Mathematics by B. V. Ramana (Tata McGraw Hill).
2. Applied Mathematics (Vol. I & Vol. II) by P.N.Wartikar and J.N.Wartikar
(Vidyarthi Griha Prakashan, Pune).

Reference Books:

1. Engineering Mathematics: A tutorial approach by Ravish R Singh and Mukul Bhatt
(Tata McGraw Hill Education Private Limited).
2. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
3. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).
4. Advanced Engineering Mathematics by Peter O'Neil (Thomas Learning).
5. Fundamentals of Mathematical Statistics by S. C. Gupta and V. K. Kapoor
(Sultan Chand & Sons)

Guidelines for Tutorial and Term Work:

- i) Tutorial for the subject shall be engaged in minimum three batches (batch size of 22 students maximum) per division.
- ii) Term work shall consist of Six assignments and on each Unit-1 to Unit-6 and is based on performance and continuous internal assessment.

BS23104: Engineering Chemistry		
Teaching Scheme:	Credits:04	Examination Scheme:
TH: 03 Hrs/Week		Course Activity: 10 Marks
		In-Semester Exam: 30 Marks
		End-Semester Exam: 60 Marks
PR: 02 Hrs/Week		Practical Exam: 30 Marks
		Term-Work: 20 Marks

Prerequisite Courses:

Knowledge of water and pollution, periodic table, Titrations- volumetric analysis, structure property relationship, types of crystals, classification and properties of polymers, knowledge of fuels, electromagnetic radiations, electrochemical series and corrosion

Companion Course, if any: Laboratory Practical

Course Objectives:

1. To understand technology involved in the analysis of water for improving its quality as a commodity by purification and the chemistry of pollution with preventive measures.
2. To acquire the knowledge and importance of electro-analytical techniques for qualitative and quantitative analysis of materials.
3. To understand chemistry of various engineering materials with composition-structure, properties and applications of speciality polymers and nano material.
4. To study conventional and green fuels with respect to their composition, properties and applications and to build consciousness about the advancement in batteries.
5. To study spectroscopic techniques for chemical analysis.
6. To understand corrosion mechanisms and study preventive methods for corrosion control.

Course Outcomes

On completion of the course, learner will be able to

CO-1: Apply different methodologies for the analysis of water and techniques involved in the softening of water as a commodity and apply the knowledge of environmental pollution to solve related problems.

- CO-2: Select appropriate electro-analytical technique and apply the method for the material analysis.
- CO-3: Illustrate the knowledge of advanced engineering materials for various engineering applications on the basis of structure and properties.
- CO-4: Analyze fuels and suggest the use of alternative green fuels along with energy storage.
- CO-5: Identify chemical compounds based on their molecular structures using UV-Visible and IR spectroscopy.
- CO-6: Explain causes of corrosion and methods used for minimizing corrosion along with finishing of metals with technological importance.

Course Contents

Unit I: Water Treatment & Pollution

(7 Hrs)

[A] **Water Treatment:** Impurities in water (Suspended, Biological & Dissolved chemical), Hardness of water- Types, Units (no conversions). Analysis of water: alkalinity, hardness (EDTA method) and chloride content (Mohr's method) determination methods and Numericals. Water Softening methods: Zeolite method with numericals, Demineralization method.

[B] **Pollution and its control:** Air pollution- Urban air quality standards as per WHO, its sources, acid rain, ozone depletion and controlling methods. Water pollution- water quality index as per WHO, its sources and controlling methods.

Unit II: Instrumental Methods of Chemical Analysis

(7 Hrs)

Qualitative and quantitative analysis.

Electro-Analytical Methods: fundamentals of an electrochemical cell, EMF of cell, reference and indicator electrodes and Nernst Equation.

1. **Conductometry:** Introduction, Kohlrausch's law, conductivity cell, conductometric titrations of strong acid versus strong base, weak acid with strong base and titration curves.
2. **pH-metry:** Introduction, Action of buffers, standardization of pH meter, pH metric titration of strong acid versus strong base with titration curve.

Unit III: Chemistry of Engineering Materials

(8 Hrs)

A] Polymers: Introduction, Classification of polymers, Polymer terminologies, properties of polymers- Crystallinity and Glass transition temperature. Speciality Polymers: Introduction, Structure, properties and applications of the following polymers-

1. Engineering Thermoplastics: Polycarbonate,
2. Biodegradable Polymers: Polyhydroxy Butyrate Valerate, PHBV
3. Conducting Polymer: Polyacetylene, PPV- OLED Applications
4. Polymer composites: Fiber reinforced plastic (FRP)- Carbon reinforced polymer composite.

B] Nanomaterials: Introduction, Importance and classification of nanomaterials based on dimensions (zero dimensional, one-dimensional, two-dimensional and three-dimensional), structure, properties and applications of graphene and carbon nanotubes, quantum dots (semiconductor nanoparticles).

Unit IV: Fuels & Batteries

(7 Hrs)

Introduction (definition, classification of fuels and characteristics of an ideal fuel)

Calorific value (CV): Higher calorific value (HCV) and Lower calorific value (LCV), Determination of Calorific value: Principle, construction and working of Bomb calorimeter and numericals,

Solid fuel: Coal: Analysis of Coal-Proximate - numericals,

Liquid fuel: Refining of petroleum /crude oil and composition, boiling range and uses of various fractions,

Green Fuels: Hydrogen gas as a future fuel: synthesis by Steam reforming method, H₂-O₂ Fuel Cell. Preparation reactions, properties, advantages and disadvantages of Power alcohol and biodiesel.

Introduction to Renewable fuels: Solar cell and batteries (Li-ion Battery).

Unit V: Spectroscopic Techniques

(6 Hrs)

Fundamentals of spectroscopy, Spectroscopy as an analytical tool, Accuracy, Precision, Reliability of Analytical data, confidence limits.

[A] Ultraviolet (UV)-Visible spectroscopy: Introduction, interaction of electromagnetic radiation with matter, Principle of UV-Visible spectroscopy, statement of Beer-Lambert's law, absorption of UV radiation by organic molecule leading to different electronic transitions.

Terms involved in UV-visible Spectroscopy- chromophore, auxochrome, bathochromic shift, hypsochromic shift, hyperchromic shift and hypochromic shift, Instrumentation and basic principle of single beam spectrophotometer, applications of UV-visible spectroscopy.

[B] Infrared (IR) spectroscopy: Principle of IR Spectroscopy, types of vibrations: Stretching (symmetric and asymmetric) and bending (scissoring, rocking, wagging and twisting), conditions of absorption of IR radiations, vibration of diatomic and polyatomic molecules. applications of IR spectroscopy.

Unit VI: Corrosion and Corrosion Control

(7 Hrs)

Introduction, Types of corrosion – Dry and Wet corrosion, mechanism of dry corrosion, nature of oxide films and Pilling-Bedworth's rule, Electrochemical theory of wet corrosion – mechanism: hydrogen evolution and oxygen absorption, galvanic cell corrosion, differential aeration corrosion. Factors influencing rate of corrosion: nature of metal, nature of environment.

Methods of corrosion control and prevention: cathodic protection, metallic coatings and its types, surface preparation, methods to apply metallic coatings - hot dipping (galvanizing and tinning), cladding and electroplating.

Books & Other Resources:

Text Books:

1. Engineering Chemistry, Wiley India Pvt. Ltd.
2. Engineering Chemistry by O. G. Palanna, Tata McGraw Hill Education Pvt. Ltd.
3. Textbook of Engineering Chemistry by Dr. S. S. Dara, Dr. S. S. Umare, S. Chand & Company Ltd.

Reference Books:

1. Basic Concept of Analytical Chemistry, 2ed, S. M. Khopkar, New Age-International Publisher.
2. Recent trends in Fuel Cell Science and Technology-Suddhasatwa Basu, Anamaya Publishers, New Delhi.
3. Spectroscopy of organic compounds, 2 ed, P. S. Kalsi, New Age-International Ltd., Publisher
4. Polymer Science, V. R. Gowarikar, N. V. Viswanathan, Jayadev Sreedhar, Wiley Eastern Ltd.

5. F.W. Billmeyer, Text Book of Polymer Science, John Wiley & Sons, 4th Edition, 1999.
6. Principles of Physical Chemistry, B.R. Puri, L.R. Sharma & M.S. Pathania, S. Nagin Chand & Co., 41 Edition, 2004.
7. Instrumental Methods of Chemical analysis, Willard Dean, Merritte, Tata McGraw Hill Limited.
8. Environmental Chemistry, A. K. De, New Age International Publications, eighth edition.

Guidelines for Laboratory - Term work Assessment:

1. The distribution of weightage of term work marks should be informed to students before start of the semester.
2. Term work assessment should be on continuous basis. At frequent intervals students are expected to inform about their progress/lagging.

Guidelines for Laboratory Conduction:

1. DO's and DONT'S, along with precautions, are need to be displayed at prominent location in the laboratory.
2. Students should be informed about DO'S and DON'T and precautions before performing.

LIST OF PRACTICALS (Any 10 to be performed by the student)

1. To determine hardness of water by EDTA method.
2. To determine alkalinity of water.
3. To determine strength of strong acid using pH meter.
4. To determine maximum wavelength of absorption of $\text{CuSO}_4/\text{FeSO}_4/\text{KMnO}_4$, verify Beer's law and find unknown concentration of given sample.
5. Titration of a mixture of weak acid and strong acid with strong base using conductometer.
6. To determine molecular weight/radius of macromolecule polystyrene/ polyvinyl alcohol by viscosity measurement.
7. Determination of fixed carbon content of coal.
8. Study of corrosion of metals in a medium of different pH.
9. Estimation of percentage of iron in the given rust solution using standard Potassium Dichromate solution (External indicator method).

10. To coat copper and zinc on iron plate using electroplating.
11. Saponification/acid value of an oil.
12. Preparation of biodiesel from edible oil.
13. Colloidal synthesis of 2-6 or 3-5 semiconductor quantum dots nano particles
14. Synthesis of Conducting Polyaniline from Aniline by Chemical Oxidative Polymerization and Conductivity measurements
15. Study of pH sensitive Keto-enol tautomerism in curcumin (Turmeric)

Teaching Scheme:	Credits:04	Examination Scheme:
TH: 03 Hrs/Week		Course Activity: 10 Marks
		In-Semester Exam: 30 Marks
		End-Semester Exam: 60 Marks
PR: 02 Hrs/Week		PR Exam: 30 Marks
		Term-Work: 20 Marks

Prerequisites: Understanding about the mechanical systems and conventional manufacturing processes.

Objectives:

- To understand importance of energy sources and conversion methods.
- To understand design fundamentals and mechanisms in mechanical systems.
- To impart knowledge of fundamentals of thermal engineering and fluid mechanics.
- To study conventional and non-conventional manufacturing processes.
- To know advanced manufacturing technologies.
- To acquire knowledge of conventional and future mobility technologies.

Course Outcomes:

CO1- *Describe* and compare the conversion of energy from renewable and non-renewable energy sources

CO2- *Select* and *identify* suitable material and mechanism for a system.

CO3- *Explain* basic laws of thermodynamics, fluid dynamics, heat transfer and their applications.

CO4- *Discuss* conventional and non-conventional manufacturing processes.

CO5- *Identify* various advanced manufacturing technologies concerned with industry automation.

CO6- *Understand* the basics of I.C Engines and electric vehicles.

Principal
Vidya Pratishthan's
Kamalnayan Bajaj Institute of
Engineering & Technology, Baramati
Vidyanagari, Baramati-413133

Unit-1: Energy Sources and its conversion**[6 Hrs.]**

Energy sources: Thermal energy, Hydropower energy, Nuclear energy, Solar energy, Geothermal energy, Wind energy, Hydrogen energy, Biomass energy and Tidal energy. Grades of Energy. (Numerical on efficiency calculation of thermal power plant).

Energy conversion devices: Introduction of pump, compressor, turbines, wind mills etc. (Simple numerical on power and efficiency calculations)

Unit-2: Design Fundamentals and Mechanisms**[6 Hrs.]**

Design: Steps in design, Mechanical Properties, Selection of Materials. (Simple numerical based on stress-strain curves)

Mechanisms: Comparison of Mechanisms and Machines, basic type of constraints in mechanism, Four Bar Mechanism, Slider Crank Mechanism, and their applications

Unit-3: Thermal Engineering and Fluid Mechanics**[6 Hrs.]**

Introduction and Laws of thermodynamics, heat engine, heat pump, refrigerator (simple numerical) Modes of heat transfer: conduction, convection and radiation, Fourier's law, Newton's law of cooling, Stefan Boltzmann's law. (Simple numerical).

Properties of fluids, Manometer (numerical), Flow Measurement: Venturi meter, Orifice Meter.

Unit-4: Conventional and Non-Conventional Manufacturing Processes**[6 Hrs.]**

Metal sand castings process. Hot working and cold working. Metal forming processes: Extrusion, drawing, rolling, forging, forging operations. Metal Joining Processes: Welding, Soldering, Brazing. Principles of powder metallurgy.

Non-conventional manufacturing: Working principle and applications of EDM, ECM and WJM, etc.

Unit-5: Advance Manufacturing Technologies

[6 Hrs.]

Additive manufacturing: Definition, classification, advantages and dis-advantages, Basics of 3-D printing technology.

Robotics: Introduction, joints and links, end effectors, common robot configurations; cartesian, cylindrical, polar, and spherical coordinates. Sensors in robotics, applications of robots.

Automation: Introduction, types of Automation, Computer Numerical Control (CNC) machines: Basic elements of CNC, advantages, and disadvantages

Unit-6: Conventional and Future Mobility Technologies

[6 Hrs.]

Introduction to IC Engines: Components and working principles, 4-Stroke Petrol and Diesel engines, Application of IC Engines, performance of I.C engines (Simple numerical).

Electric and Hybrid Vehicles-comparison, Components, and specifications of Electric and Hybrid Vehicles, Battery Management System (BMS).

Guidelines for Lab /TW Assessment

1. Group A: Industry / Workshop/Showroom Visit-**TW-05 Marks**
2. Group B: Assignments based on the specified syllabus (Six Assignments) -**TW-15 Marks**
3. Group C: Experiments: (Any-08 Experiments)-**PR-30 Marks**
 1. Design of solar electrical system for a required load.
 2. Design of wind electrical system for a given load.
 3. Pressure measurement using simple U-tube manometer.
 4. Selection and design of mechanism for a mechanical system.
 5. Design and manufacturing of simple component using additive manufacturing.
 6. Comparison of I.C and electric vehicles based on their specifications.
 7. Study and hands on any one metal joining process.
 8. Prediction of heat transfer rate for conduction/convection/radiation.
 9. Performance prediction for all convectional and electrical vehicles.
 10. Design and performance prediction of solar thermal system.

ME23102-Engineering Graphics- F.Y.- B. Tech (Sem-I and Sem-II)		
Teaching Scheme:	Credits:02	Examination Scheme:
TH: 01 Hrs/Week		Course Activity: 10 Marks
PR: 02 Hr/Week		End-Semester Exam: 40 Marks
		TW: 30 Marks

Engineering Graphics is a fundamental subject in engineering that involves creating and interpreting graphical representations of objects, designs, and systems. It serves as a communication tool among engineers, designers, and other stakeholders in the engineering field. It is considered as a language of an engineer.

Prerequisite: Basic trigonometry and knowledge of basic drawing instruments

Course Objectives:

1. To familiarize students with technical drawing conventions and abbreviations.
2. To communicate design concepts effectively through graphical representation.
3. To develop visualization skills through orthographic and isometric projections.
4. To acquire knowledge of development of lateral surfaces for optimizing material usage.
5. To make use of Computer Aided Design (CAD) software for developing technical drawings.

Course Outcomes On completion of the course, learner will be able to

CO1: Develop various engineering curves using the drawing instruments.

CO2: Construct development of lateral surfaces for cut sections of geometrical solids.

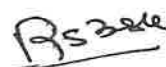

CO3: Generate 2D drawings from 3D views using the concept of Orthographic Projection

CO4: Generate 3D views from 2D drawings using the concept of Isometric Projection

CO5: Construct fully-dimensioned 2D, 3D. drawings using computer aided drafting tools.

Unit-1: Engineering Graphics Fundamentals and Engineering Curves

[3 Hrs.]

Need of Engineering Drawing and design, Sheet layout, Line types and dimensioning and simple geometrical constructions, *Introduction to CAD software: Basic commands*, Introduction to conic sections and its significance, various methods to construct the conic sections. Helix for cone and cylinder, rolling curves (Involute, Cycloid) and Spiral.

Unit-2: Development of Lateral Surfaces

[3 Hrs.]

Introduction to development of lateral surfaces and its industrial applications. Draw the development of lateral surfaces for cut sections of cone, pyramid, prism etc.

Unit-3: Orthographic Projection

[3 Hrs.]

Principles of Orthographic Projections, types of orthographic projections—First angle and third angle projections, obtaining orthographic projections of given pictorial views by using first angle projection method along with sectional views.

Unit-4: Isometric Projections

[3 Hrs.]

Principles of Isometric projection – Isometric and natural Scale, Isometric views of simple and compound solids, drawing isometric views from given orthographic views.

Practical Session (Term Work Assessment Guidelines)

Draw minimum two problems on each assignment on the A3 size drawing sheet.

Suggested List of Laboratory Experiments/Assignments

Assignment 1: Construct an Engineering Curves by appropriate method based on the input data.

Assignment 2: Draw the development of the lateral surface of a solid/ truncated solid.

Assignment 3: Orthographic view of any machine element along with sectional view.

Assignment 4: Draw Isometric view for given orthographic views.

Assignment 5: Construct above assignments with same or different problems using CAD software.

EL23104: Fundamentals of Electrical Engineering		
Teaching Scheme:	Credits:02	Examination Scheme:
TH: 02 Hrs/Week		Course Activity: 10 Marks
		In-Semester Exam: 20 Marks
		End-Semester Exam: 40 Marks

Prerequisite Courses:

Engineering physics, Electron theory, Fundamentals of Electromagnetism.

Companion Course, if any: Laboratory Practical

Course Objectives:

1. To introduce fundamental concepts of DC circuits, Star-Delta transformation, KCL, KVL and to find the solution of circuits and all electrical quantities such as current, voltage, power, energy, frequency along with different parameters of AC waveform phase angles and various arithmetic operations of phasor quantities..
2. To impart knowledge of electromagnetic circuits, differentiate electromagnetic circuits with electric circuits and self as well as mutually magnetically coupled circuits
3. To explain operation of single phase AC transformers and calculate various parameters..

Course Outcomes

On completion of the course, learner will be able to

CO-1: Apply star-delta transformation techniques to simplify the resistive circuits, analyze parameters of alternating quantity, differentiate various types of phase angles and perform various arithmetic operations of phasor quantities.

CO-2: Apply the knowledge of electromagnetic circuits to calculate various parameters as well as to differentiate magnetic circuits with electrical circuits and electromagnetic induction to find various parameters of self and mutually magnetically coupled circuits.

CO-3 Understand the operation of single phase AC transformer to calculate various parameters at different loading conditions

[Signature]

[Signature]

Course Contents

Unit I: DC Circuits and AC Fundamentals (10 Hrs)

Part A DC Circuits (5 Hrs)

Classification of electrical networks, classification of voltage as well as current sources, Source transformation techniques with numerical practice, find out equivalent resistance of circuit by using Series and parallel combinations with numerical practice, Star to Delta and delta to star conversion for simplification of networks with numerical practice. Kirchhoff's Laws for Network Solutions using loop analysis with numerical practice.

Part B AC Fundamentals (5 Hrs)

Sinusoidal voltages and currents, their mathematical and graphical representation, Definitions and numerical practice: cycle, Period, frequency, instantaneous, peak (maximum), derivation of average and r.m.s. values, peak factor and form factor. Phase difference: lagging, leading and in phase quantities and phasor representation, numerical practice to calculate instantaneous value and other parameters from waveform and to construct a waveform from given parameters.

Unit II: Electromagnetism (9 Hrs)

Magnetic effect of an electric current, cross and dot conventions, right hand thumb rule, nature of magnetic field of long straight conductor, solenoid and toroid. Definitions, units and with numerical practice: magnetomotive force, flux, flux density, reluctance, permeability and field strength, and their relationships. Comparison of electric and magnetic circuit, force on current carrying conductor placed in magnetic field, Fleming's left hand rule Faraday's laws of electromagnetic induction, Lenz's law, Fleming's right hand rule. Statically and dynamically induced e.m.f, self and mutual inductance, coefficient of couplings with numerical practice.

Unit III: Single phase AC Transformer (9 Hrs)

Principle of working, construction and types, emf equation, transformation ratio, turns ratio, voltage ratio and current ratio. Losses, definition of regulation and efficiency, derivation of efficiency at different load conditions, derivation of condition for maximum efficiency with numerical practice, determination of regulation and efficiency by direct loading method with numerical practice, Auto transformer with the ratings and applications(theoretical treatment only) Comparison of autotransformer with two winding transformers with respect to saving

of copper and size.

Workshop (Mech) ME23103 F. Y. B. Tech (Sem-I)		
Teaching Scheme: TH : 01 Hr/Week PR : 02 Hr/Week	Credit 02	Examination Scheme: Course Activity: 10 Marks Term Work: 20 Marks Practical: 30 Marks
Prerequisites: Awareness of basic safety, good listening ability to follow instructions later, etc		
Course Objectives: <ol style="list-style-type: none"> 1. To understand workshop layout and safety norms. 2. To understand the construction and working of machine tools and functions of its parts. 3. To develop the skill through hands-on practices using hand tools, power tools, machine tools in manufacturing and assembly shop leading to understanding of a production processes. 4. To understand need and use of advanced manufacturing systems. 		
Course Outcomes: <p>CO1: Familiar with safety norms to prevent any mishap in the workshop.</p> <p>CO2: Able to handle appropriate hand tools, cutting tools and machine tools to manufacture a job.</p> <p>CO3: Able to understand the construction, working and functions of machine tools and their parts.</p> <p>CO4: Able to know advanced manufacturing systems.</p>		
Unit - I Introduction of Machines and Cutting Tools: (6 Hrs) <p>Classification of manufacturing processes; Mechanics of machining; basic machine tools and their operations; Metal cutting tools, single and multi-point cutting tools, tool geometry and materials, tool life and wear. (simple numericals)</p>		
Unit - II Testing, Inspection and Quality Control: (6 Hrs) <p>Destructive and nondestructive testing; Introduction to engineering metrology; Elements of Interchangeability, limits, fits and types of fits; Quality Control - Introduction of control charts and sampling inspection. (simple numericals)</p>

Guidelines for Laboratory Conduction (Total 8 practicals are to be conducted).

i. 1st on importance of workshop practical and shop floor safety norms

ii. 2nd to 8th Sessions are about demonstration of machine tools (Any 5)

iii. 9th to 12th on making utility job (Any 2 in a group of 4 to 5 students)

1. Mandatory briefing on shop-floor safety, industry safety and factories acts.

2. Demonstration and working of centre lathe Demonstration on various functions of lathe parts: Headstock, Tailstock, Carriage, Lead screw, All geared Mechanism, Apron mechanism etc.

3. Demonstration of Drilling machine Demonstration on construction of Radial drilling machine, Tool holding devices, Concept of speed, feed and depth of cut.

4. Demonstration on Milling machine Demonstration on construction, table movements, indexing and tooling of milling machine.

5. Demonstration of Grinding machine, Grinding: Surface grinder/Cylindrical grinding machine, Mounting of grinding wheel

6. Demonstration of CNC/ VMC Machine

7. Demonstration of Robotic cell

8. Demonstration of hydraulic and pneumatic trainer

9. One utility job of Carpentry Introduction to woodworking, kinds of woods, hand tools & machines, Types of joints, wood turning. Pattern making, types of patterns and its allowances.

10. One utility job preferably using sheet metal (e.g. Tray, Funnel, etc.) with riveting/welding/brazing/soldering (at least one temporary and one Permanent; joint either using resistance welding/Arc welding); Introduction to sheet metal operations: punching, blanking, bending, drawing.

11. One utility job on 3D printing -Modeling, Slicing and Printing of simple objects.

12. One utility job on simple Lathe operations: Step turning and facing, drilling operation on a Mild Steel cylindrical job on centre lathe. Understanding the concept of speed, feed and depth of cut.

Guidelines for TW Assessment: (Any or combination of following activities for 20 Marks)

i. *One Assignment on each Unit.*

ii. *Concept Tests on each Unit/Concepts*

Guidelines for Practical Exam:

i. *Performance of one job and practical based oral (in group of 4 to 5 students): 30 Marks*

HS23102: Indian Knowledge System		
Teaching Scheme: TH: 01 Hr./Week PR: 02 Hrs./Week	Credit: 02	Examination Scheme: Course Activity: 10 Marks TW: 20 Marks Oral Exam: 30 Marks

Course Objectives:

1. To create awareness about the history and rich culture of the country.
2. To introduce Vedic mathematics principles for faster calculations.
3. To know the science and Astronomy contributions of the traditional knowledge of Bhārata.
4. To learn engineering and technology contributions of the traditional knowledge of Bhārata.
5. To Convert the Bhāratīya wisdom into the applied aspect of the modern scientific paradigm
6. Adding career, professional and business opportunities to the youths.

Course Outcomes: Students will be able to

CO1: Explain the historicity of Indian Knowledge System and the broad classification of Indian philosophical systems.

CO2: Apply Vedic Mathematics for faster calculations.

CO3: Understand the importance of science and astronomy concepts developed Bhārata;

CO4: To understand the contributions in the science, engineering & technology heritage of ancient and medieval India.

Course Contents

UNIT -I: Bhāratīya Civilization and Development of Knowledge System (04 hours)

Genesis of the land, Antiquity of civilization, the Saraswatī-Sindhu Civilization, Traditional Knowledge System, The Vedas, Main Schools of Philosophy, Ancient Education System, the Takṣaśilā University, the Nālandā University, Knowledge Export from Bhārata. Ethnic Studies, Life Science studies, Agriculture, Ecology and Environment, Āyurveda, Integrated Approach to Healthcare, Medicine, Microbiology, Surgery, and Yoga.

UNIT-II: Vedic Mathematics (08 hours)

Indian Mathematicians, Varahmihir, Brahmagupta, Srinivasa Ramanujan, Neelkanth Somayya, Bharti Krishna Tirtha, Introduction to sutras, and sub sutras,

Methods for Addition, Multiplication, division, squaring and square roots, cube and cube roots, Factorization. Differentiation and Integration methods

Easy Solution of linear equations: Introduction of simple equation, Solutions of simple equations, Solutions of linear equations in two variables, Practical application of linear equations in two variables, Quadratic equations

High-Speed Matrix Algebra: Introduction and history of Matrices and Determinants, Matrices and Determinants of third order, Inverse of Matrices,

Vedic Geometry: Different forms of straight lines, The Triangle, The Cyclic Quadrilateral, Squares, and the Circle, Geometrical constructions (such as Altars), Transformation of simple shapes, Kalpa Sutras-Srautha Sutras and Sulbha Sutras

UNIT-III: Science, Astronomy

(04 hours)

Concept of Matter, Life and Universe, Gravity, Sage Agastya's Model of Battery, Velocity of Light, Vimāna: Aeronautics, Vedic Cosmology and Modern Concepts, Bhāratiya Kāla-gaṇanā, History and Culture of Astronomy, Sun, Earth, Moon, and Eclipses, Earth is Spherical and Rotation of Earth, Archaeoastronomy.

UNIT-IV: Engineering, Technology, and Architecture

(04 hours)

Pre-Harappan and Sindhu Valley Civilization, Laboratory and Apparatus, Juices, Dyes, Paints and Cements, Glass and Pottery, Metallurgy, Engineering Science and Technology in the Vedic Age and Post-Vedic Records, Iron Pillar of Delhi, Rakhigarhi, Mehrgarh, Sindhu Valley Civilization, Marine Technology, and Bet-Dwārka.

Textbooks:

1. Textbook on The Knowledge System of Bhārata by Bhag Chand Chauhan,
2. Engineering and Technology in Ancient India by Ravi Prakash Arya
3. History of Science in India Volume-1, Part-I, Part-II, Volume VIII, by Sibaji Raha, et al. National Academy of Sciences, India and The Ramakrishna Mission Institute of Culture, Kolkata (2014).
4. Science and Technology in Ancient Indian Texts by Bal Ram Singh, Nath Girish, Umesh Kumar Singh
5. Vedic Mathematics, Swami Bharati Krishna Trithaji, Motilal Banarsidass, New Delhi.

Reference Books:

1. Pride of India- A Glimpse of India's Scientific Heritage edited by Pradeep Kohle et al. Samskrit Bharati (2006).

2. Vedic Physics by Keshav Dev Verma, Motilal Banarsidass Publishers (2012).
3. India's Glorious Scientific Tradition by Suresh Soni, Ocean Books Pvt. Ltd. (2010).
4. Modern Introduction to Ancient Indian Mathematics, T S Bhanumurthy, Wiley Eastern Limited, New Delhi
5. Advance Vedic Mathematics, Rajkumar Thakur, Rupa Publications India Pvt. Ltd 2019
6. Arihant Vedic Mathematics Made Easy - Pt. Ramnandan Shastri
7. Magical World of Mathematics, VG Unkalkar, Vandana publishers, Bangalore

HS23103A - Physical Education - Exercise and Field Activities-I		
Teaching Scheme: Theory: -- Practical: 2 Hour/Week	Credits: 01	Examination Scheme: Practical: 30 Marks

Prerequisites:

Introduction to sports and yoga.

Course Objectives:

- To impart the students with basic concepts of Physical Education, Sports and Yoga for health and wellness.
- To familiarize the students with health related Exercise, Sports and Yoga for Overall growth & development.
- To impart the basic knowledge and skills to teach Physical Education, Sports & Yoga activities.

Course Outcomes (COs): The students will be able to

CO1: To understand the basic principles and practices of Physical Education, Sports and Yoga.

CO2: To be able to practice Physical Activities, Sports and Yoga.

Course Contents

1. Introduction to Sports and Health. (04 Hours)

Need and Importance, History, Types, Typical equipment and other requirements, Precautions, Benefits, Rules and regulations, and Modern trends of Physical Education, Sports and Yoga (Through class room videos interaction/Self learning videos)

2. Physical Fitness Practice: (12 Hours)

- Importance of Yoga & Fitness.
- Fundamental Principles of Yoga & Fitness Training.
- Components of Fitness and Fitness Equipment.
- Types of Yoga Practices – Yogic Asanas, Pranayama and Meditation
- Introduction to Nutrition and Balanced Diet for Fitness

3. Sports and Games

(12 Hours)

- Student should select one unique game out of the following in each Semester:

- Outdoor Games: Cricket, Volleyball, Basketball, Kabbadi, Khokho, Handball, Netball, Softball, Football, Baseball, Skating.
- Indoor Games: Badminton, Table Tennis, Ball badminton, Lawn Tennis, Wrestling, Squash..
- Athletics: Track Events, Long Jump, High Jump, Triple Jump, Shot put, Discus Throw, Hammer, Javelin Throw, Archery, Pole Vault.
- Gymnastics: Mallakhamb, Rope Mallakhamb .
- Swimming: Swimming Events, Diving, Water polo.
- Other Indoor Games:
(A) Weight Lifting, Power Lifting, Body Building.
(B) Board Games: Chess, Bridge.
- Martial Arts: Boxing, Judo, (Taekwondo, Fencing, Karate)

Text Books:

1. DK (2021) Know your sport,DK India.
2. J Bains (2019),Essential of physical education,Kalyani publication.
3. Swami Vivekananda Yoga Prakashana

Reference Books:

1. William Martin (2023),the book of sports.
2. Om book editorial team (2016),Encyclopedia:Sports Encyclopedia Om book international.
3. Yogacharya Swami Omkareshwarananda (2019),Yogasanas,Pranayama and Meditation,Pigeon books.
4. V.K.Sharma (2022),Health and physical education,New sarawati house India Pvt.Ltd.
5. You tube and other online resourses.

Guidelines for Practical Conduction:

1. Physical Education
 - General & Specific warm up exercises
 - Recreation Games and Fitness
 - Any one Major Game
2. Yoga
 - Suryanamaskara
 - Basic Set of Yoga Asanas
 - Basic Set of Pranayama & Meditation

FY B. Tech Semester I		
Subject Name: Cocurricular course – I Subject Code :-HS23104 -A		
Teaching Scheme:	Credits: 01	Examination Scheme:
TH: -		Course Activity:
PR: 02 Hrs./Week		In-Semester Exam: -
		End-Semester Exam: -
		PR 30 Marks

Introduction:

The Cocurricular course is designed to introduce students to the world of performing arts by combining dance, drama, and various art forms. Students will learn to express themselves creatively, collaborate with peers, and develop a deeper understanding of storytelling through movement, acting, and visual arts.

Companion Course, if any: Practical

Course Objectives:

The course aims to foster creativity, collaboration, and a holistic understanding of performing arts and their integration.

Course Outcomes:

On completion of the course, learner will be able to –

CO1: express themselves creatively.

CO2: demonstrate teamwork, and collaboration with peers.

CO3: develop a deeper understanding of storytelling through movement, acting, and visual arts.

CO4: enhance experiential learning through use of technology for effective communication.

Course Contents

Unit I: Introduction to Co-curricular Activities (6 Hrs.)

Types, Theory (of Music, Dance, Theater, Literary, Fine Art, Applied and Other Forms), Programmes and Competitions, Benefits, Professional Aspects

Unit II: Performing Activities/Practicing – Demos etc. (10Hrs.)

Student **must Join one / one from each group** of the following clubs and perform activities on given theme in group or Individual.

Group I:

(a) Music and Singing: Singing and Instrumental (Percussion Group: Keyboard, Tabla, Flute etc.) and String Group: (Tambora, Veena, Guitar, Violin, Banjo etc.), Folk Type: Dafali, Ektari, Dholki.

Types: Classical, Semi-classical, and Westerns

(b) Dance: Types: Classical, Semi-classical, Contemporary

(c) Theater: Drama, One-act-play, Mono-act, Skit, Mime, Mimicry,

Group II:

(d) Literary: Poetry, Elocution, Quiz, Debate

(e) **Art & Craft and Fine Art:** Drawing, Painting, Rangoli, Cartooning, Knitting, Weaving, Embroidery, Quilling, Paper Folding, Clay Modeling, Tattoo Making, Photography, Videography, Digital Art (Related to Computers, Media)

(f) **Other Activities:** NSS, Gardening, Cooking.

Unit III: Post Activity

(6 Hrs)

Report preparation/ performance video/ Participation/ Group Activities/ Professional Certification.

Sample Topics in each Performing Activity: Performing, Choreography/Composing/Direction, Backstage Management (Lighting, ...) Literary: Script Writing.

Guidelines for Laboratory - Practical Assessment:

1. The distribution of weightage of practical marks should be informed to students before start of the semester.
2. Student progress should be observed on a continuous basis. At frequent intervals students are expected to inform about their progress/lagging. Practical examinations will be conducted at the end of semester.

LIST OF ACTIVITIES (to be performed by the student)

1. Students should prepare a short video of his/her own art form. (3-4 min)
2. Student should participate in any of the competition conducted in the institute or outside the institute as an outcome of the course and to show evidence of the same.
3. Student should prepare a portfolio report of his/her work for submission.

**Kamalnayan Bajaj Institute of
Engineering & Technology, Baramati**
Vidyanagari, Baramati-413133

 Vidya Pratishthan's Kamalnayan Bajaj Institute of Engineering and Technology, Baramati (Autonomous Institute)		
First Year Engineering (2023 Course)		
BS23102 - Engineering Mathematics-II (Ordinary Differential Equations, integral Calculus and Fourier Series)		
Teaching Scheme: Theory: 3 Hours/Week Tutorial: 1 Hour/Week	Credits 04	Examination Scheme: In-Semester Exam: 30 Marks End-Semester Exam: 60 Marks Course Activity: 10 Marks Term Work: 20 Marks

Prerequisites:

Differentiation, Integration, Differential Equations.

Course Objectives:

To make the students familiarize with Mathematical Modeling of physical systems using differential equation, advanced techniques of integration, tracing of curves, multiple integrals and their applications. The aim is to equip them with the techniques to understand advanced level mathematics and its applications that would enhance thinking power, useful in their disciplines.

Course Outcomes (COs): The students will be able to

CO1: Solve first order first degree differential equations using suitable methods.

CO2: Apply the concept of differential equations for various physical systems such as Newton's law of cooling, electrical circuits, rectilinear motion, mass spring system and heat transfer.

CO3: Understand basic concepts of periodic functions, Fourier series, harmonic analysis.

CO4: Evaluate definite improper integrals using techniques like Gamma, Beta function, DUIS, and Error function.

CO5: Sketching the curve of a given equation and measuring the arc length of various curves.

CO6: Evaluate multiple integrals and apply it to calculate area, volume, Center of gravity and moment of inertia.

VPKBIET, Baramati-413133

Principal
 Vidya Pratishthan's
 Kamalnayan Bajaj Institute of
 Engineering & Technology, Baramati
 Vidyanagari, Baramati-413133

Course Contents

Unit 1: First Order Ordinary Differential Equations [07 Hours]

Exact differential equations, Equations reducible to exact form. Linear differential equations, Equations reducible to linear form, Bernoulli's Equation.

Unit 2: Applications of Differential Equations [07 Hours]

Applications of Differential Equations to Orthogonal Trajectories, Newton's Law of Cooling, Kirchhoff's Law of Electric Circuits, Rectilinear Motion, One Dimensional Conduction of Heat.

Unit 3: Fourier Series [07 Hours]

Definition, Dirichlet's conditions, Full Range Fourier Series, Half Range Fourier Series, Harmonic Analysis and Applications to Problems in Engineering.

Unit 4: Integral Calculus [07 Hours]

Reduction Formulae, Beta and Gamma functions, Differentiation Under Integral Sign and Error functions.

Unit 5: Curve Tracing [07 Hours]

Tracing of Curves Cartesian, Polar and Parametric curves, Rectification of curves.

Unit 6: Multiple Integrals and their Applications [07 Hours]

Double and Triple integrations, Change of order of integration, Applications to find Area, Volume, Mass, Centre of Gravity and Moment of Inertia.

Text Books:

1. Higher Engineering Mathematics by B. V. Ramana (Tata McGraw Hill).
2. Applied Mathematics (Vol. II & Vol. III) by P.N.Wartikar and J.N.Wartikar (Vidarthi Griha Prakashan, Pune).
3. Engineering Mathematics: A tutorial approach by Ravish R Singh and Mukul Bhatt (Tata McGraw Hill Education Private Limited)

Reference Books:

1. Higher Engineering Mathematics by B. S. Grewal (Khanna Publication, Delhi).
2. Advanced Engineering Mathematics by Erwin Kreyszig (Wiley Eastern Ltd.).
3. Advanced Engineering Mathematics by Peter O'Neil (Thomas Learning).
4. Schaum's Outlines: Differential Equations by Richard Bronson and Gabriel B. Costa.
5. Schaum's Outlines: Calculus by Frank Ayres and Elliott Mendelson.

Guidelines for Tutorial and Term Work:

- Tutorial for the subject shall be engaged in minimum three batches (batch size of 23 students maximum) per division.
- Term work shall consist of Six assignments and on each Unit-1 to Unit-6 and is based on performance and continuous internal assessment.

BS23103: Engineering Physics		
Teaching Scheme: TH : 03 Hrs./week PR : 02 Hrs./Week	Credits 04	Examination Scheme: Activity: 10 Marks In Semester: 30 Marks End Semester: 60 Marks PR Exam: 30 Marks TW: 20 Marks

Prerequisite Courses, if any:

Fundamentals of: optics, interference, diffraction polarization, wave-particle duality, semiconductors, and magnetism

Companion Course, if any: Laboratory Practical, Term work

Course objectives

To teach students basic concepts and principles of physics, relate them to laboratory experiments and their applications

Course Outcomes:

On completion of the course, the learner will be able to –

CO1: Understand the basics of wave optics and their applications in the engineering field.

CO2: Learn the basics of lasers and optical fibers and their use in some applications.

CO3: Understand concepts and principles in quantum mechanics and its applications in various fields.

CO4: Understand the theory of semiconductors and their uses in electronic devices.

CO5: Explain the basics of magnetism and superconductivity. Explore a few of their technological applications.

CO6: Comprehend the use of concepts of physics for Non-Destructive Testing. Learn some properties of nanomaterials and their applications.

Course Content

Unit I: Wave Optics

(07 Hrs)

Interference

Introduction to interference, Constructive and destructive interference, Path difference and phase difference, Interference in a thin film of uniform thickness (with derivation), Interference in a thin film wedge shape (qualitative), Applications of interference: testing optical flatness, anti-reflection coating.

Diffraction

Diffraction of light, Diffraction at a single slit, conditions for principal maxima and minima. Diffraction grating (qualitative).

Polarization

Polarization of light, Malus law, Specific rotation (qualitative only), Optically active materials, Laurent's Half shade polarimeter.

Unit II: Laser and Optic Fibre

(07 Hrs)

Laser

Basics of laser and its mechanism, characteristics of laser. Semiconductor laser, ii) Ruby laser, iii) He-Ne laser.

Applications of lasers: Holography, IT, industrial, medical.

Optic Fiber

Introduction, Acceptance Angle, Acceptance Cone, Numerical Aperture, Attenuation and reasons for losses in optic fibers (qualitative), Communication system: Basic building blocks, Advantages of optical fiber communication over conventional methods.

Unit III: Quantum Mechanics

(07 Hrs)

De-Broglie hypothesis, De-Broglie wavelength in terms of kinetic energy and potential Heisenberg Uncertainty Principle, Properties of matter-wave, Wave-function and its physical significance, Schrodinger's equations: time-independent and time-dependent, Application of Schrodinger's time independent wave equation - Particle enclosed in an infinitely deep potential well (Particle in Rigid Box) and numerical.

Unit IV: Semiconductor Physics

(07 Hrs)

Introduction, classification of solids based on band theory. Conductivity of conductors and semiconductors, Fermi Dirac distribution function, Position of Fermi level in intrinsic semiconductors (with derivations) and extrinsic semiconductor (qualitative) Hall effect: Derivation for Hall voltage, Hall coefficient, applications of Hall effect, Formation of PN junction with band diagram (forward and reverse bias), Solar cell (basic principle with band diagram) I-V Characteristics.

Unit V: Magnetism and Superconductivity

(07 Hrs.)

Magnetism

Origin of magnetism, Magnetic parameters, Classification of magnetism based on permeability (qualitative), Applications of Magnetic Devices: Magneto-optical recording.

Superconductivity

Introduction to superconductivity; Properties of superconductors: Zero electrical resistance, Meissner effect, Critical magnetic field, Persistent current, Type I and Type II superconductors, Applications of superconductors: SQUID, Maglev.

Unit VI: Non-Destructive Testing and Nanotechnology

(07 Hrs.)

Non Destructive Testing

Introduction to non-destructive testing, Difference between destructive and non-destructive testing, Advantages of Non-destructive testing, Methods of Non-destructive testing, Acoustic Emission Testing, Ultrasonic (thickness measurement, flaw detection), Radiography testing.

Nanotechnology

Introduction to nanotechnology, Surface-to-volume ratio, Properties of nanoparticles: optical, electrical, mechanical, Applications of nanoparticles: Medical (targeted drug delivery), electronics, industrial, automobile.

Books:

Text Books:

1. Engineering Physics, Avadhanulu, Kshirsagar, S. Chand Publications
2. A textbook of optics – N Subrahmanyam and BriLal, S. Chand Publications
3. Engineering Physics, Gaur, Gupta, Dhanpat Rai and Sons Publications

Reference Books

1. Fundamentals of Physics, Resnick and Halliday (John Wiley and Sons)

2. Optics, Jenkins and White (Tata Mcgraw Hill)
3. Principles of Physics, Serway, and Jewett (Saunders College Publishing)
4. Introduction to Solid State Physics, C. Kittel (Wiley and Sons)
5. Principles of Solid State Physics, H. V. Keer, New Age International
6. Laser and Non-Linear Optics, B. B. Laud (Oscar publication)
7. Nanotechnology: Principles and Practices, Dr. S. K. Kulkarni (Capital Publishing Company)

List of experiments (Any eight)

1. To determine the radius of curvature of a plano-convex lens by Newton's ring method.
2. To determine wavelength by using a plane diffraction grating.
3. Determination of specific rotation of a solution with Laurent's Half Shade Polarimeter
4. Experiment based on Laser (Thickness of wire, determination of grating element).
5. To determine the energy band gap of a semiconductor.
6. To study I-V characteristics and determine the fill factor of a solar cell.
7. To determine the Hall coefficient and charge carrier density.
8. To determine the absorption coefficient of the sound of a given material.
9. To determine ultrasonic velocity in liquid using an ultrasonic interferometer and its compressibility.
10. To find out the resolving power of Diffraction Grating/Telescope.
11. To verify Malus Law.
12. Determination of electrical resistivity of given semiconductor using four probe method.
13. To find out the Magnetic susceptibility of a given material.

Baramati, Baramati-413133

Course Name with Code: Engineering Mechanics (CE23104)		
Teaching Scheme: TH: 03 Hrs/week PR: 02 Hrs/Week	Credits 04	Examination Scheme: Activity: 10 Marks In Semester: 30 Marks End Semester: 60 Marks TW: 20 Marks PR: 30 Marks

Prerequisites:

1. Basic principles of trigonometry
2. Geometry
3. Algebra
4. Linear differentiation and integration
5. Principles of Physics (equations of motions)

Companion Course, if any: Laboratory Practical

Course Objectives:

1. To impart knowledge about force systems and methods to determine resultant of force system.
2. To impart knowledge about Principle of equilibrium to determine- reaction of beams, support reactions, friction forces.
3. To study the structural members and calculate member forces in trusses, cables and frames.
4. To impart knowledge about centroid and center of gravity to determine resultant centroid and moment of inertia
5. To train students to solve application problems related to particle mechanics using principles of kinematics, kinetics and work power energy.

Course Outcomes:

On completion of the course, learner will be able to—

CO1: Determine resultant of various force systems.

CO2: Determine reactions of beams, sphere, strings and friction forces using principles of equilibrium.

CO3: Solve trusses, cables for finding member forces and apply principles of equilibrium.

CO4: Determine centroid of area and moment of inertia for plane lamina and composite figures.

CO5: Calculate position, velocity and acceleration of particle using principles of kinematics.

CO6: Calculate position, velocity and acceleration of particle using principles of kinetics and Work & Energy.

Course Contents

Unit I: Resolution and Composition of Forces

(07Hrs)

Introduction and Principle of statics, force systems, Principle of superposition & Transmissibility, resolution and composition of forces, resultant of concurrent forces, moment of a force, Couple, Varignon's theorem, resultant of parallel force system, Equivalent Force Couple system.

Unit II: Equilibrium and Friction

(07 Hrs)

Equilibrium

Free body Diagram, equilibrium of concurrent, parallel forces in a plane, equilibrium of general forces in plane equilibrium of three forces. Types of beams: simple and compound beams, type of loads, types of supports.

Friction- Introduction to friction, Law of friction, application of friction on Blocks and ladder, application to flat belt.

Unit III: Analysis of Structures

(07Hrs)

Analysis of plane trusses by method of joint, analysis of plane trusses by method of section, cables with supports at same and different level subjected to point loads, Analysis of simple plane frame.

Unit IV: Centroid of Plane Lamina, Moment of Inertia

(07 Hrs)

Centroid of plane lamina, moment of inertia (MI), perpendicular axis theorem, parallel axis theorem, MI of standard shapes.

Unit V: Kinematics of Particle

(07 Hrs)

Kinematics of linear motion, constant acceleration, motion under gravity, equations of motions in cartesian and path coordinates for curvilinear motion, projectile motion.

Unit VI: Kinetics of Particle

(07 Hrs)

Newton's second Law and its applications to rectilinear motion, curvilinear motion, and introduction to work energy principle and impulse momentum equation, direct and central impact, coefficient of restitution.

3. Engineering Mechanics -Timoshenko and Young, McGraw Hill Publications, 5th Edition, (2013)
4. Introduction of Engineering Mechanics- S. Rajshekar and G Sankarasubramanian, Vikas Publications, 1st Edition, (2011)
5. Engineering Mechanics- R.S. Khurmi, S. Chand Publications, 3rd Edition, (2019)

Laboratory Course

Guidelines for Instructor's Manual

An instruction manual with aim, objective, apparatus, procedure and calculations to be performed for each experiment to be provided for students called as Lab Manual. Every year problems for assignment should be changed. It is advisable to give different data to different batches.

Guidelines for Student's Lab Journal

Journal should be hand written Guidelines for Lab /TW Assessment Each and every experiment should be assessed and given mark out of 10. Finally the marks can be converted as per given in the structure.

Guidelines for Laboratory Conduction

Divide the students of a batch in groups of not more than 4 students and ask each group to take readings separately followed by calculations for each experiment. After every experiment faculty should sign the lab manual of readings of every student in the batch.

Suggested List of Laboratory Experiments/Assignments

Group-A

1. To verify the law of polygon of forces.
2. To determine support reaction of simple beams.
3. Determination of coefficient friction of belt.
4. To study the curvilinear motion.
5. Determination of the coefficient of restitution.

Group B

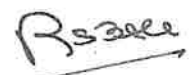

Assignment of minimum five problems on every unit to be solved during practical.

Group C

Analysis of any structure by using any modern tools (ANSYS, ABAQUS, EXCLE or Programming).

CO23101: Programming and Problem Solving		
Teaching Scheme: TH: 03 Hrs./Week PR: 02 Hrs./Week	Credits 04	Examination Scheme: Activity : 10 Marks In-Semester : 30 Marks End-Semester : 60 Marks TW : 20 Marks PR : 30 Marks
Prerequisite Courses, if any: students are expected to have a good understanding of basic computer principles.		
Companion Course, if any: Programming and Problem Solving Laboratory		
Course Objectives: The Primary objective is to give students a basic introduction to programming and problem solving with the computer language Python. And to introduce students not merely to the coding of computer programs, but to computational thinking, the methodology of computer programming, and the principles of good program design including modularity and encapsulation. <ol style="list-style-type: none"> 1. To understand problem solving, problem solving aspects, programming and to know about various program design tools. 2. To learn problem solving with computers 3. To learn basics, features and the future of Python programming. 4. To acquaint with data types, input output statements, decision making, looping and functions in Python 5. To learn features of Object Oriented Programming using Python 6. To acquaint with the use and benefits of files handling in Python 		
Following Fields are applicable for courses with companion Laboratory course		
Course Outcomes: On completion of the course, the learner will be able to – CO1: Apply various skills in problem solving. CO2: Choose the most appropriate programming constructs to solve the problems CO3: Exhibit the programming skills for writing of well- documented programs including use of the logical constructs. CO4: Use modular programming approach to solve problems CO5: Apply several built-in functions in python to manipulate strings & to handle files CO6: Apply object oriented constructs for organizing code to maximize its reusability		
Course Contents		
Unit I Problem Solving, Programming and Python Programming (07 Hrs) General Problem Solving Concepts- Problem solving in everyday life, types of problems, problem solving with computers, difficulties with problem solving, Problem Solving Strategies, Top down design. Program Design Tools: Algorithms, Flowcharts and Pseudo-codes, implementation of algorithms. Basics of Python Programming: Features of Python, Literal constants, variables and identifiers, Basic Data Types, Input operation, Comments, Keywords, Indentation, Operators and expressions, Expressions in Python, Writing and executing Python programs.

Unit II	Python List, Tuples and Dictionary	(07 Hrs)
List: Creating list, traversing list, List operations, List methods, List slicing, map and reduce. Tuple: Creating tuple, traversing tuple, tuple operation, tuple methods, conversion: list to tuple & tuple to list Dictionaries: Creating dictionary, key and value, dictionary operations, dictionary methods		
Unit III	Decision Control Statements	(07 Hrs)
Decision Control Statements: Decision control statements, Selection/conditional branching Statements: if, if-else, nested if statements. Basic loop Structures/Iterative statements: while loop, for loop. Nested loops, Looping with indices, The <i>break</i> , <i>continue</i> , <i>pass</i> , <i>else</i> statement used with loops.		
Unit IV	Functions and Modules	(07 Hrs)
Need for functions, Function: definition, call, variable scope and lifetime, Function arguments, return statement. Defining functions, Type conversions, Recursive function, Advanced Functions: lambda, map, filter, reduce, documentation string, Modular programming: Introduction to modules, Introduction to packages in Python, Overview of standard library, Introduction to Some commonly used libraries (math) and Mathplotlib		
Unit V	Strings and File Handling	(07 Hrs)
Strings and Operations- concatenation, appending, multiplication and slicing, strings formatting operator, built in string methods and functions, Slice operation, in and not in operators, comparing strings, Iterating strings, the string module, Debugging. Files: Introduction, File path, Types of files, Opening and Closing files, Reading and Writing files. Directory Introduction and basic operations.		
Unit VI	Object Oriented Programming	(07 Hrs)
Programming Paradigms-monolithic, procedural, structured and object oriented, Features of Object oriented programming: classes, objects, data abstraction and encapsulation, inheritance, polymorphism, reusability, methods and message passing, delegation, Classes and Objects: Creating class, Creating object, class variables and object variables , public and private members, self-method, class method, constructor

Guidelines for Laboratory Conduction

List of laboratory assignments is provided below for reference. The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy needs to address the average students and inclusive of an element to attract and promote the intelligent students. The instructor may set multiple sets of assignments and distribute them among batches of students. It is appreciated if the assignments are based on real world problems/applications. Encourage students for appropriate use of coding style, proper indentation and comments.

Use of open source software and recent versions is to be encouraged.

In addition to these, instructors may assign one real life application in the form of a mini-project based on the concepts learned. Instructors may also set one assignment or mini-project that is suitable to each branch beyond the scope of the syllabus.

Suggested List of Laboratory Experiments/Assignments

Sr. No.	Problem Statement Write Program in Python (with function/class/file, as applicable)
1.	To calculate the salary of an employee given his basic pay (taken as input from the user). Calculate gross salary of employee. Let HRA be 10 % of basic pay and TA be 5% of basic pay. Let employees pay professional tax as 2% of total salary. Calculate net salary payable after deductions.
2.	To accept an object mass in kilograms and velocity in meters per second and display its momentum. Momentum is calculated as $e=mc^2$ where m is the mass of the object and c is its velocity.
3.	To accept N numbers from users. Compute and display maximum in list, minimum in list, sum and average of numbers.
4.	To accept a student's five course marks and compute his/her result. Student is passing if he/she scores marks equal to and above 40 in each course. If student scores aggregate greater than 75%, then the grade is distinguished. If aggregate is $60 \geq$ and < 75 then the grade of first division. If aggregate is $50 \geq$ and < 60 , then the grade is second division. If aggregate is $40 \geq$ and < 50 , then the grade is third division.
5.	To check whether the input number is Armstrong number or not. An Armstrong number is an integer with three digits such that the sum of the cubes of its digits is equal to the number itself. Ex. 371.
6.	To simulate a simple calculator that performs basic tasks such as addition, subtraction, multiplication and division with special operations like computing x^y and $x!$.
7.	To accept the number and Compute a) square root of number, b) Square of number, c) Cube of number d) check for prime, d) factorial of number e) prime factors
8.	To accept two numbers from user and compute smallest divisor and Greatest Common Divisor of these two numbers.
9.	To accept a number from the user and print digits of the number in a reverse order.
10.	To input a binary number from the user and convert it into a decimal number.

IT23101: Computer Proficiency		
Teaching Scheme:	Credits: 02	Examination Scheme:
TH: 01 Hrs/Week		Practical Exam: 30 Marks
PR: 02 Hrs/Week		Activity 10 Marks
		Term Work: 20 Marks

Prerequisite Courses: Basic Computer knowledge

Course Objectives:

1. Understand the basics of computer operating systems.
2. Apply Basic operations on data using word sheets, spreadsheets, and presentations.
3. Understand the WWW and information on the Internet (the web).
4. Understand the networks and its working.
5. Understand Digital Financial Services, e-commerce technologies.
6. Use of various Social Media networking platforms, e-Governance and their usage etc.

Course Outcomes:

On completion of the course, learner will be able to –

- CO1:** Understand the working and function of the computer system and Operating System.
- CO2:** Apply word processing skills for preparing documents.
- CO3:** Design spreads sheet for preparing database records.
- CO4:** Create powerpoint presentation for business purpose.
- CO5:** Understand basic concepts of HTML CSS and Networking.
- CO6:** Use social media platforms and Google technologies.

Course Contents

Unit I: Introduction to Operating System [03 Hours]

Installation of Operating System(OS), Main features of Windows OS, Concept of various shortcut commands, booting system, Types of memories and their features, Hardware and software issues and their solutions, Usage of Application software and Antivirus, Basic DOS Internal and External Commands, Open Source Software, Introduction to Linux Operating System, features, structure, files and processes, Basic Linux commands.

Unit II: Word Processing Application: [02 Hours]

Introduction to the various applications in Microsoft Office(MS)/ LibreOffice/ MS Office 365/Google Docs, Word features, Office button toolbars. Creating, saving, formatting and printing documents using Word. Working with objects, macro, mail merge, templates and other tools in Word.

Unit III: Spreadsheet Application: [03 Hours]

Introduction to Excel, Features and Data Types. Cell referencing and linking Sheets. Introduction to various functions in all categories of Excel. Concepts of sorting, filtering and validating data. Analyzing

data using charts, data tables, pivot tables, goal seek and scenarios.

Unit IV: Powerpoint Presentations

[02 Hours]

Image editing, Presentations, Introduction to Open Office. Introduction to the properties and editing Of images. Introduction to different formats of images and their uses. Introduction to PowerPoint and its advantages. Creating Slideshows.

Unit V: Communicating in a Connected World

[02 Hours]

Concept of Web: Introduction to Programming and Scripting Languages, Introduction to HTML and various tags in HTML, Concepts of CSS and applying CSS to HTML, communicating on a Local Network, how are Networks Built? Networks types-LAN, MAN, WAN, W-LAN, roles of devices in a network. How Does Wi-Fi Work? Internet Concepts-Introduction to www, Concept of Internet, Web Browsers, internet servers and search engine. Introduction to Cyber Security.

Unit VI: E-Commerce and Online Social Platforms

[02 Hours]

(A)Introduction to E Commerce and advantages. Demonstrate e-Commerce sites. List features of e-commerce sites. Use e-commerce sites to search for an item.

(B)Google Technologies: Gmail, Google Form, Google Maps, Google Classroom, YouTube, Google Ads

(C)Online Meets: Google Meet, Zoom, WebEx, Microsoft team.

(D)Interactive Touch Screen Board.

(E)Social Networking: Linked In, Facebook, WhatsApp, Instagram, Twitter etc.

Text Books:

1. Computer Basics for Beginner by Daniel Guzman.
2. Absolute Beginners Guide to Computing by Wallace Wang
3. Jon Duckett's HTML and CSS.

Reference Books:

1. Computer Basics Absolute Beginner's Guide, Windows 10 Edition by Michael Miller
2. Computers for Seniors: Email, Internet, Photos, and More in 14 Easy Lessons by Chris Ewin, Carrie Ewin & Cheryl Ewin
3. Computers Made Easy: From Dummy to Geek by James Bernstein
4. "Is This Thing On?": A Friendly Guide to Everything Digital for Newbies, Technophobes, and the Kic by Abby Stokes.
5. A beginner's guide to HTML, CSS, JavaScript, and Web Graphics, by Jennifer Niederst Robbins.

Guidelines for Lab /TW Assessment

- Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out. Appropriate knowledge of usage of software and hardware related to respective laboratories should be as a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers of the program in a journal may be avoided. There must be hand-written write-ups for every assignment in the journal.
- The HDD/SSD/USB drive containing student programs should be attached to the journal by every student and the same to be maintained by the department/lab In-charge is highly encouraged. For reference one or two journals may be maintained with program prints at Laboratory.

- Term work shall consist of six assignments and Practical's on each Unit-1 to Unit-6 and is based on performance and continuous internal assessment.

Guidelines for Laboratory Conduction

1. All the assignments should be implemented.
2. All assignments are compulsory.
3. The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic.
4. All the assignments should be conducted on the latest version of Windows OS and MS office.
5. The following practical should be conducted batch wise using Computer System, with Webcam and headphone facility.
6. Practical for the subject shall be engaged in minimum four batches (batch size of 20 students).

List of Assignments

1. Demonstration of OS installation : Windows and Linux. Study and execute basic linux commands.
2. Prepare Resume using MS office/LibreOffice/MS Office 365/Google Docs following feature:
Heading Font Size: 12 Bold, Font type: Times New Roman, Tables, Images, Bullets. List.
3. Create a database for student result analysis records using MS excel sheet (Use properties like: Sum, Average, Order, Alphabet order, Percentage, Topper list, analysis)
4. Design a PowerPoint Presentation for a suitable topic using following design features like drawing, design, transition, animations, themes, timing etc.
5. Create a web page using HTML and CSS. (Website domain: Educational, Social, Entertainment, Sports, Trading, Medical, etc.).
6. (A) Create your personal social media account on LinkedIn. Group discussion on technical topics using Zoom/Google meet/Microsoft team online platform.
(B) Study and Understand how to use the Google technologies (Gmail, Classroom, YouTube, etc.), Record, upload and publish videos on YouTube.

HS23101: Communication and Professional Skills F.Y. B. Tech (Sem-I and Sem-II)		
Teaching Scheme: TH.: 2 Hr. / Week	Credits: 02	Examination Scheme: Activity: 10 Marks TW : 20 Marks Oral : 30 Marks

Course Objectives:

1. To communicate well using meaningful sentences for conversation or speech
2. To comprehend communication process and write effectively and enhance formal communication
3. To acquire better presentation skills and participate in healthy discussion: both formal and informal among peers
4. To be confident in facing interviews, acquiring professional skills and be industry ready

Course Outcomes: On completion of the Course, learner will be able to:

CO1: Communicate with their peers and professionals confidently.

CO2: Understand how to analyse their personality using SWOC analysis technique.

CO3: Develop presentation and participate in group discussion.

CO4: Understand and implement etiquette in workplace and in society at large.

Course Contents

Unit I: English Grammar and Linguistic Competence Building [07 Hrs.]

Tenses in English, Modal Auxiliary Verbs, Enhancement of Word Power, Essentials of Pronunciation in English

Unit II: Language Skills and Presentation Skills Enhancement [07 Hrs.]

Listening, Speaking, Reading and Writing, Making an Effective Presentation, Group Discussion: Dos and Don'ts of Group Discussion

Unit III: Business Writing [07 Hrs.]

Letter Writing, Resume Writing, Report Writing, Email Writing

Unit IV: Job Readiness

[07 Hrs.]

Professional Etiquette, SWOC Analysis, Types of Interviews, Interview Skills, Mock Interview, Facing an Interview

Term Work/Assignments:

Term work will consist of the record of the following assignments.

1. Letter/Application writing
2. Resume writing
3. Group Discussion
4. Report Writing

Textbooks:

- *Communication Skills for Technical Students* by T. M. Farhatullah, Orient Longman, 2002.
- *Communication for Business: A Practical Approach* by Shirley Tailor and V Chandra, Pearson, 2010.

HS23103 B - Physical Education - Exercise and Field Activities-II		
Teaching Scheme: Theory: -- Practical: 2 Hour/Week	Credits: 01	Examination Scheme: Practical: 30 Marks

Prerequisites:

Introduction to sports and yoga.

Course Objectives:

- To impart the students with basic concepts of Physical Education, Sports and Yoga for health and wellness.
- To familiarize the students with health related Exercise, Sports and Yoga for Overall growth & development.
- To impart the basic knowledge and skills to teach Physical Education, Sports & Yoga activities.

Course Outcomes (COs): The students will be able to

CO1: To understand the basic principles and practices of Physical Education, Sports and Yoga.

CO2: To be able to practice Physical Activities, Sports and Yoga.

Course Contents

1. **Introduction to Sports and Health.** (04 Hours)
Need and Importance, History, Types, Typical equipment and other requirements, Precautions, Benefits, Rules and regulations, and Modern trends of Physical Education, Sports and Yoga (Through class room videos interaction/Self learning videos)
2. **Physical Fitness Practice:** (12 Hours)
 - Importance of Yoga & Fitness.
 - Fundamental Principles of Yoga & Fitness Training.
 - Components of Fitness and Fitness Equipment.
 - Types of Yoga Practices – Yogic Asanas, Pranayama and Meditation
 - Introduction to Nutrition and Balanced Diet for Fitness

3. Sports and Games

(12 Hours)

- Student should select one unique game out of the following in each Semester:

- Outdoor Games: Cricket, Volleyball, Basketball, Kabbadi, Khokho, Handball, Netball, Softball, Football, Baseball, Skating.
- Indoor Games: Badminton, Table Tennis, Ball badminton, Lawn Tennis, Wrestling, Squash..
- Athletics: Track Events, Long Jump, High Jump, Triple Jump, Shot put, Discus Throw, Hammer, Javelin Throw, Archery, Pole Vault.
- Gymnastics: Mallakhamb, Rope Mallakhamb .
- Swimming: Swimming Events, Diving, Water polo.
- Other Indoor Games:
(A) Weight Lifting, Power Lifting, Body Building.
(B) Board Games: Chess, Bridge.
- Martial Arts: Boxing, Judo, (Taekwondo, Fencing, Karate)

Text Books:

1. DK (2021) Know your sport, DK India.
2. J Bains (2019), Essential of physical education, Kalyani publication.
3. Swami Vivekananda Yoga Prakashana

Reference Books:

1. William Martin (2023), the book of sports.
2. Om book editorial team (2016), Encyclopedia: Sports Encyclopedia Om book international.
3. Yogacharya Swami Omkareshwarananda (2019), Yogasanas, Pranayama and Meditation, Pigeon books.
4. V.K.Sharma (2022), Health and physical education, New sarawati house India Pvt.Ltd.
5. You tube and other online resourses.

Guidelines for Practical Conduction:

1. Physical Education
 - General & Specific warm up exercises
 - Récreation Games and Fitness
 - Any one Major Game
2. Yoga
 - Suryanamaskara
 - Basic Set of Yoga Asanas
 - Basic Set of Pranayama & Meditation

FY B. Tech Semester II		
Subject Name: Cocurricular course – II Subject Code: -HS23104 -B		
Teaching Scheme:	Credits: 01	Examination Scheme:
TH: -		Course Activity:
PR: 02 Hrs./Week		In-Semester Exam: -
		End-Semester Exam: -
		PR 30 Marks

Introduction:

The Cocurricular course is designed to introduce students to the world of performing arts by combining dance, drama, and various art forms. Students will learn to express themselves creatively, collaborate with peers, and develop a deeper understanding of storytelling through movement, acting, and visual arts.

Companion Course, if any: Practical

Course Objectives:

The course aims to foster creativity, collaboration, and a holistic understanding of performing arts and their integration.

Course Outcomes:

On completion of the course, learner will be able to –

CO1: express themselves creatively.

CO2: demonstrate teamwork, and collaboration with peers.

CO3: develop a deeper understanding of storytelling through movement, acting, and visual arts.

CO4: enhance experiential learning through use of technology for effective communication.

Course Contents

Unit I: Introduction to Co-curricular Activities (6 Hrs.)

Types, Theory (of Music, Dance, Theater, Literary, Fine Art, Applied and Other Forms), Programmes and Competitions, Benefits, Professional Aspects

Unit II: Performing Activities/Practicing – Demos etc. (10Hrs.)

Student **must Join one / one from each group** of the following clubs and perform activities on given theme in group or Individual.

Group I:

(a) **Music and Singing:** Singing and Instrumental (Percussion Group: Keyboard, Tabla, Flute etc.) and String Group: (Tambora, Veena, Guitar, Violin, Banjo etc.), Folk Type: Dafali, Ektari, Dholki.

Types: Classical, Semi-classical, and Westerns

(b) **Dance:** Types: Classical, Semi-classical, Contemporary

(c) **Theater:** Drama, One-act-play, Mono-act, Skit, Mime, Mimicry,

Group II:

(d) **Literary:** Poetry, Elocution, Quiz, Debate

(e) **Art & Craft and Fine Art:** Drawing, Painting, Rangoli, Cartooning, Knitting, Weaving,

Embroidery, Quilling, Paper Folding, Clay Modeling Tattoo Making Photography, Videography, Digital Art (Related to Computers, Media)

(f) **Other Activities:** NSS, Gardening, Cooking.

Unit III: Post Activity

(6 Hrs)

Report preparation/ performance video/ Participation/ Group Activities/ Professional Certification.

Sample Topics in each Performing Activity: Performing, Choreography/Composing/Direction, Backstage Management (Lighting, ...) Literary: Script Writing.

Guidelines for Laboratory - Practical Assessment:

1. The distribution of weightage of practical marks should be informed to students before start of the semester.
2. Student progress should be observed on a continuous basis. At frequent intervals students are expected to inform about their progress/lagging. Practical examinations will be conducted at the end of semester.

LIST OF ACTIVITIES (to be performed by the student)

1. Students should prepare a short video of his/her own art form. (3-4 min)
2. Student should participate in any of the competition conducted in the institute or outside the institute as an outcome of the course and to show evidence of the same.
3. Student should prepare a portfolio report of his/her work for submission.
